How to find Latitude and Longitude on a smart phone (Requires service):

1. Open your phone's mapping program. (Usually "Maps" or "Google Maps")
2. Find your location on the map. (usually indicated by a blue dot with an arrow pointing in the direction you are moving)
3. With your finger or finger nail, press and hold at that location to drop a pin on the Map.

4. The latitude and longitude will be displayed in the information for that pin.

Typically these will be in the format 00.0000°N for Latitude and 000.0000°W for longitude. Sometimes the phone will give additional digits behind the decimal; record all parts of the location.

For our purposes, Latitude and Longitude are preferred in Decimal Degrees
(i.e. 34.5033°N , $-114.3528^{\circ}\text{W}$)
